| <b>2</b> | <b>Indices and tables</b>                   | <b>5</b> |

## HEADER2

Sample text

JSON formatted code

```
{  
  "key": "value"  
}
```

python formatted code

```
pygments_style = 'sphinx'
```

Bash formatted code

```
whoami  
ls -lrt
```

## 1.1 Guide

Contents:

### 1.1.1 Installation Documentation - Demo

#### Introduction

This section describes the Linux Installation

#### Check Ansible Server

#### Log onto Ansible

Log onto the Ansible Server as an Admin (user with sudo yum) user and issue command

```
uname -a  
cat /etc/redhat-release
```

The above will show the current linux version

### Check yum repos

```
yum repolist
```

Ensure that there are no repos with 0 items

### Configure Variables

Define additional variables

There should be an additional variables that need to be defined

```
export DUMMYVAR=foo
```

### Installation via Command Line

#### Run Job

Issue the command, press y and then [ENTER] when prompted

```
sudo yum update
```

**Warning:** This command may take some time

#### Reboot

If kernel packages were updated, issue the following command:

```
sudo reboot
```

Note: Confirm server reboots

## 1.1.2 Introduction

This section describes the a demo Procedure

### 1.1.3 Check Ansible Version

#### Log onto Ansible

Log onto the Ansible Server as an Admin user and issue command

```
ansible --version
```

The above will show the current Ansible version

### 1.1.4 Update Ansible Inventory

The Ansible inventory uses a YAML formatted file, therefore spacing is very important.

#### Update Inventory

Add the following block to the `/etc/ansible/hosts` files

```
[webserver]
servera.demo.net
```

### 1.1.5 Legacy Install

This is a sample

## INDICES AND TABLES

- `genindex`
- `modindex`
- `search`
